

ENVIRONMENTAL POLICY

01 March 2021

Refuse Vehicle Solutions Limited, Suppliers of Quality used refuse vehicles and spare parts are committed to environmental good practice in all elements of our activity and in doing so our company will:

Minimise energised waste as far as possible. Staff should support this objective by:

- Making sure that lights are not left on at night
- Turning off computers and monitors at the end of the working day
- Turning off lights in offices where natural light is adequate
- Not making excessive use of air conditioning or heating units

Strive to reduce energy wastage and the environmental impact of energy use by:

- Considering the use of renewable or sustainable energy sources
- Buying energy efficient equipment where older equipment is retired
- Ensuring that Company premises are well insulated and energy efficient

Promote the recycling or re-use of waste materials, by-products or equipment wherever possible. The Company is committed to recycling products wherever this is viable. Paper, cardboard and ink and toner cartridges should all be recycled. Other items may be recycled subject to the availability of recycling services.

Expect staff to use recycling bins where these are provided for this purpose. Where the company retires any old equipment, it will consider whether the equipment or its components can be sold or donated to interested parties rather than being disposed of.

Consider the environmental impact of all products and suppliers which it uses.

The Company will periodically consider whether there is a viable alternative which is more environmentally friendly.

Spencer Law
Managing Director
Refuse Vehicle Solutions
